

The suction filter is a self-sealing filter like a valve which is used in suction canisters/liners, when the canister/liner is full and the filter gets wet, the filter starts to work and shut off automatically and instantly. The self-sealing filters can filter the air and protect the hospital central vacuum system, protect the vacuum pump against contaminants, barrier against the bacteria, make the operations more smoothly and safe.

Material: UHMW-PE

Manufacturing Type: Sintered Porous Filters
